

## THE 15<sup>TH</sup> EUROPHYSICAL CONFERENCE ON DEFECTS IN INSULATING MATERIALS

AND

## 1<sup>ST</sup> EUROPEAN SCHOOL ON DEFECTS IN INSULATING MATERIALS Timisoara, ROMANIA, 04-10 July 2026

After the very successful EuroDIMs in Ghent, Belgium (2022), Bydgoszcz, Poland (2018), Kent, UK (2014), Pecs, Hungary (2010), Milan, Italy (2006), Wroclaw, Poland (2002), EuroDIM-15, will be held in Timisoara, Romania. Timisoara also called "Little Vienna" is a strong university center and in 2023 it held the title of the cultural capital of Europe. Timisoara has an international airport with at least 3 daily flights to Munich, Germany. There are also connections to Milan (Bergamo), Paris Beauvais, London Luton, Rome Fiumicino, and Brussels. The aim of the conference is to bring together researchers from university, industry, and government laboratories around the world to report on the latest advances studies of defects in insulating materials.

Topics will include all areas related to point and extended defects in bulk materials, thin films and nanostructures. Technological applications will be presented alongside fundamental measurements and theories. The main scientific areas include:

- Fundamental physical phenomena;
- Point and extended defects in wide band-gap systems;
- Defects at surfaces and interfaces;
- Thin films and low-dimensional systems;
- Nanocrystals, colloids and aggregates;
- Defects and material preparation technology;
- Defects modeling and computational methods;
- Radiation effects, radiation induced defects, colour centers;
- Luminescence spectroscopy of excitons, impurities, and defects, including using of synchrotron radiation;
- Electronic excitations, excited state dynamics, radiative and non-radiative relaxations;

- Scintillation, energy transfer and storage, carrier trapping phenomena;
- Laser active centers;
- Defect related non-linear optical phenomena;
- Phonons and defects, electron-phonon interactions;
- Defect diffusion, ionic relaxations, ionic transport;
- Technological applications including:
  - Radiological and radiometric imaging and detection (scintillators and dosimeters);
  - Optical devices and photonics, photorefractive electro-optics, optical fibres, lasers;
  - Materials for opto-electronics, photonics and micro-electronics;
  - Solid electrolytes, fuel cells, electrochemical sensors, fast ionic conductors;

EuroDIM-15 will provide a great opportunity to exchange ideas, allowing for fruitful discussions between industrial, academic, and scientific participants from diverse fields. The conference will include plenary, keynotes, invited, oral presentations, poster sessions, and industrial exhibits. Industry participants are invited to present open issues that will encourage participants to address these issues in the future.
